about **U L T R A**

ULTRA can be used in the recommended mix, without any limitation, as it has been specially developed for use on all artificial floors in p.e. sports accomodations (both in and outside), ship-decks, food industry, shops etc.

handballwax can also be removed with **ULTRA/ULTRA 60+**

ULTRA is highly alcalic, -pH 13,0-, but neither poisonous, corrosiv, etching nor irratating and is fully disparable. **ULTRA** does not content phosphates, no detergents and no solvents and is totally artificial authentic.

ULTRA (the only cleaner known) does **NOT** content any substances that remain on the floor after cleaning and filthen the floor in a very fast way, nor make the floor slippery when getting wet, nor sensitive for rubber marks. Tyre-/shoe marks however belong to artificial floors and always will be. A floor cleaned with **ULTRA** does show less, shorter and easier removable rubber marks, never gets slippery and keeps its grip and elasticity.

ULTRA is no lye (soaps as natrium - and/or caliumhidroxyde) and contents, as only cleaner, non- and cat-ionic tensides. The high pH has been obtained by synergetically action and not by adding a lye.

ULTRA is available as a GEL and as a liquid.

According to EEC regulations, **ULTRA** is **no danger-good**.
